FADE IN:

INT. A MESSY LIVING ROOM - DAY

KB sits at his laptop, pondering upon the nature of screenplay format. The INTERNET helps him.

KB

How does this work then?

INTERNET

We have an imaginary conversation about script format. It's not very sophisticated or imaginative, but you have a hangover.

KB

(embarrassed)

That's true. So is it easy to create a standard Hollywood-formatted screenplay in Scrivener, then?

INTERNET

Fairly. This PDF file was in fact created in Scrivener, using the basic Screenplay project template. The text was typed using Script Mode from the Format > Scriptwriting menu, and then the whole thing was turned into a PDF file using File > Compile...

KB

Handy. Right, how should margins be set up, then?

INTERNET

The left margin should be 1.5 inches, all others should be about an inch. Scrivener's standard script elements start half an inch from the left margin in the editor, so if you print or export with one inch margins all around, everything should be dandy.

KB

What about fonts?

INTERNET
As usual with manuscript
formatting, the standard is a
Courier 12-point font.

KB thinks for a moment before continuing.

KB
What about bold and italics? Can I
use them?

INTERNET
Hell no. No bold, no italics;
nothing fancy.

KB
Can we go to another scene now?

Suddenly, KB gets sucked into the computer.

INT. INSIDE THE COMPUTER - DAY

KB looks around.

KB
(looking around)
What the--

INTERNET (V.O.)
That was a scene heading. All caps.
And this is a voice-over, for no
particular reason.

KB
Okay, so this is your basic script
format, then. Cool. Can I go home
now? It's teatime.

FADE OUT.

THE END
